Exam question from Amazon's AWS Certified AI Practitioner AIF-C01
Question #: 1
Topic #: 1
[All AWS Certified AI Practitioner AIF-C01 Questions]

A company makes forecasts each quarter to decide how to optimize operations to meet expected demand. The company uses ML models to make these forecasts.
An AI practitioner is writing a report about the trained ML models to provide transparency and explainability to company stakeholders.
What should the AI practitioner include in the report to meet the transparency and explainability requirements?

A. Code for model training

B. Partial dependence plots (PDPs) Most Voted

C. Sample data for training

D. Model convergence tables

Suggested Answer: B

Community vote distribution

B (98%) 2%

Question #: 2
Topic #: 1
[All AWS Certified AI Practitioner AIF-C01 Questions]

A law firm wants to build an AI application by using large language models (LLMs). The application will read legal documents and extract key points from the documents.
Which solution meets these requirements?

A. Build an automatic named entity recognition system.

B. Create a recommendation engine.

C. Develop a summarization chatbot. Most Voted

D. Develop a multi-language translation system.

Suggested Answer: C

A (100%)

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01
Question #: 4
Topic #: 1
[All AWS Certified AI Practitioner AIF-C01 Questions]

A company has built an image classification model to predict plant diseases from photos of plant leaves. The company wants to evaluate how many images the model classified correctly.
Which evaluation metric should the company use to measure the model's performance?

A. R-squared score

B. Accuracy Most Voted

C. Root mean squared error (RMSE)

D. Learning rate

Suggested Answer: B

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01
Question #: 5
Topic #: 1
[All AWS Certified AI Practitioner AIF-C01 Questions]

A company is using a pre-trained large language model (LLM) to build a chatbot for product recommendations. The company needs the LLM outputs to be short and written in a specific language.
Which solution will align the LLM response quality with the company's expectations?

A. Adjust the prompt. Most Voted

B. Choose an LLM of a different size.

C. Increase the temperature.

D. Increase the Top K value.

Suggested Answer: A

Community vote distribution

A (100%)

Question #: 6
Topic #: 1
[All AWS Certified AI Practitioner AIF-C01 Questions]

A company uses Amazon SageMaker for its ML pipeline in a production environment. The company has large input data sizes up to 1 GB and processing times up to 1 hour. The company needs near real-time latency.
Which SageMaker inference option meets these requirements?

A. Real-time inference

B. Serverless inference

C. Asynchronous inference Most Voted

D. Batch transform

Suggested Answer: C

Question #: 7
Topic #: 1
[All AWS Certified AI Practitioner AIF-C01 Questions]

A company is using domain-specific models. The company wants to avoid creating new models from the beginning. The company instead wants to adapt pre-trained models to create models for new, related tasks.
Which ML strategy meets these requirements?

A. Increase the number of epochs.

B. Use transfer learning. **Most Voted**

C. Decrease the number of epochs.

D. Use unsupervised learning.

Suggested Answer: B

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01
Question #: 9
Topic #: 1
[All AWS Certified AI Practitioner AIF-C01 Questions]

A company wants to create a chatbot by using a foundation model (FM) on Amazon Bedrock. The FM needs to access encrypted data that is stored in an Amazon S3 bucket. The data is encrypted with Amazon S3 managed keys (SSE-S3).
The FM encounters a failure when attempting to access the S3 bucket data.
Which solution will meet these requirements?

A. Ensure that the role that Amazon Bedrock assumes has permission to decrypt data with the correct encryption key. Most Voted

B. Set the access permissions for the S3 buckets to allow public access to enable access over the internet.

C. Use prompt engineering techniques to tell the model to look for information in Amazon S3.

D. Ensure that the S3 data does not contain sensitive information.

Suggested Answer: A

A (100%)

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01
Question #: 14
Topic #: 1
[All AWS Certified AI Practitioner AIF-C01 Questions]

A company wants to develop an educational game where users answer questions such as the following: "A jar contains six red, four green, and three yellow marbles. What is the probability of choosing a green marble from the jar?"
Which solution meets these requirements with the LEAST operational overhead?

A. Use supervised learning to create a regression model that will predict probability.

B. Use reinforcement learning to train a model to return the probability.

C. Use code that will calculate probability by using simple rules and computations. Most Voted

D. Use unsupervised learning to create a model that will estimate probability density.

Question #: 83
Topic #: 1
[All AWS Certified AI Practitioner AIF-C01 Questions]

A company wants to assess the costs that are associated with using a large language model (LLM) to generate inferences. The company wants to use Amazon Bedrock to build generative AI applications.
Which factor will drive the inference costs?

A. Number of tokens consumed Most Voted

B. Temperature value

C. Amount of data used to train the LLM

D. Total training time

Suggested Answer: A

Exam question from Amazon's AWS Certified AI Practitioner AIF-C01
Question #: 223
Topic #: 1
[All AWS Certified AI Practitioner AIF-C01 Questions]

A company has set up a translation tool to help its customer service team handle issues from customers around the world. The company wants to evaluate the performance of the translation tool. The company sets up a parallel data process that compares the responses from the tool to responses from actual humans. Both sets of responses are generated on the same set of documents.

Which strategy should the company use to evaluate the translation tool?

A. Use the Bilingual Evaluation Understudy (BLEU) score to estimate the absolute translation quality of the two methods.

B. Use the Bilingual Evaluation Understudy (BLEU) score to estimate the relative translation quality of the two methods. Most Voted

C. Use the BERTScore to estimate the absolute translation quality of the two methods.

D. Use the BERTScore to estimate the relative translation quality of the two methods.

Suggested Answer: B

[All AWS Certified AI Practitioner AIF-C01 Questions]

A company is developing an ML model to predict heart disease risk. The model uses patient data, such as age, cholesterol, blood pressure, smoking status, and exercise habits. The dataset includes a target value that indicates whether a patient has heart disease.

Which ML technique will meet these requirements?

A. Unsupervised learning

B. Supervised learning Most Voted

C. Reinforcement learning

D. Semi-supervised learning

Suggested Answer: B

A company has guidelines for data storage and deletion.

Which data governance strategy does this describe?

A. Data de-identification

B. Data quality standards

C. Data retention

D. Log storage

Suggested Answer: C

Question #: 315
Topic #: 1
[All AWS Certified AI Practitioner AIF-C01 Questions]

A company needs to apply numerical transformations to a set of images to transpose and rotate the images.

Which solution will meet these requirements in the MOST operationally efficient way?

A. Create a deep neural network by using the images as input.

B. Create an AWS Lambda function to perform the transformations. Most Voted

C. Use an Amazon Bedrock large language model (LLM) with a high temperature.

D. Use AWS Glue Data Quality to make corrections to each image.

[All AWS Certified AI Practitioner AIF-C01 Questions]

An AI practitioner is writing software code. The AI practitioner wants to quickly develop a test case and create documentation for the code.

Which solution will meet these requirements with the LEAST effort?

A. Upload the code to an online coding assistant.

B. Develop an application to use foundation models (FMs).

C. Use Amazon Q Developer in an integrated development environment (IDE).

D. Research and write test cases. Then, create test cases and add documentation.

Suggested Answer: C

[All AWS Certified AI Practitioner AIF-C01 Questions]

A company is developing a generative AI application to automatically generate product descriptions for an ecommerce website. The product descriptions must consist of paragraphs of text that are consistent in style and tone. The application must generate thousands of unique descriptions each day.

Which type of generative model will meet these requirements?

A. A variational autoencoder (VAE) model

B. A transformer-based model Most Voted

C. A diffusion model

D. A generative adversarial network (GAN) model

Suggested Answer: B

[All AWS Certified AI Practitioner AIF-C01 Questions]

An AI practitioner has trained a model on a training dataset. The model performs well on the training data. However, the model does not perform well on evaluation data.

What is the MOST likely cause of this issue?

A. The model is underfit.

B. The model requires prompt engineering.

C. The model is biased.

D. The model is overfit.

Suggested Answer: D

Topic #: 1
[All AWS Certified AI Practitioner AIF-C01 Questions]

A company is using Amazon Bedrock to build an AI assistant. The AI assistant helps customers find relevant products by making suggestions. However, the AI assistant's responses are often generic and irrelevant. The company wants to use prompt engineering to improve the AI assistant's responses.

Which solution will meet these requirements?

A. Use few-shot prompting to add domain-specific context and explicit instructions.

B. Use chain-of-thought prompting with hidden reasoning steps to ignore explicit domain instructions.

C. Modify the AI assistant's conversational style to use more formal language and include technical product specifications.

D. Use zero-shot prompting to augment retrieval from a product database.

Suggested Answer: A

Question #: 325
Topic #: 1
[All AWS Certified AI Practitioner AIF-C01 Questions]

A company is using a pre-trained large language model (LLM). The LLM must perform multiple tasks that require specific domain knowledge. The LLM does not have information about several technical topics in the domain. The company has unlabeled data that the company can use to fine-tune the model.

Which fine-tuning method will meet these requirements?

A. Full training

B. Supervised fine-tuning

C. Continued pre-training

D. Retrieval Augmented Generation (RAG)

Suggested Answer: C

[All AWS Certified AI Practitioner AIF-C01 Questions]

A company wants to classify images of different objects based on custom features extracted from a dataset.

Which solution will meet this requirement with the LEAST development effort?

A. Use traditional ML algorithms with custom features extracted from the dataset.

B. Use a pre-trained deep learning model. Fine-tune the model on the dataset.

C. Use a generative adversarial network (GAN) model to classify the images.

D. Use a support vector machine (SVM) with manually engineered features for classification.

[All AWS Certified AI Practitioner AIF-C01 Questions]

A company wants to use Amazon Q Business for its data. The company needs to ensure the security and privacy of the data.

Which combination of steps will meet these requirements? (Choose two.)

A. Enable AWS Key Management Service (AWS KMS) keys for the Amazon Q Business Enterprise index.

B. Set up cross-account access to the Amazon Q index.

C. Configure Amazon Inspector for authentication.

D. Allow public access to the Amazon Q index.

E. Configure AWS Identity and Access Management (IAM) for authentication.

Suggested Answer: AE

[All AWS Certified AI Practitioner AIF-C01 Questions]

An AI practitioner must fine-tune an open source large language model (LLM) for text categorization. The dataset is already prepared.

Which solution will meet these requirements with the LEAST operational effort?

A. Create a custom model training job in PartyRock on Amazon Bedrock.

B. Use Amazon SageMaker JumpStart to create a training job.

C. Use a custom script to run an Amazon SageMaker AI model training job.

D. Create a Jupyter notebook on an Amazon EC2 instance. Use the notebook to train the model.

Suggested Answer: B
